Bahrain Islamic Bank B.S.C.

Risk and Capital Management Disclosure

for the period ended 30 June 2019

	Content		Page

1 Background

The Public Disclosures under this section have been prepared in accordance with the Central Bank of Bahrain ("CBB") requirements outlined in its Public Disclosure Module ("PD"), Section PD-1: Annual Disclosure requirements, CBB Rule Book, Volume 2 for Islamic Banks. Rules concerning the disclosures under this section are applicable to Bahrain Islamic Bank B.S.C. (the "Bank") being a locally incorporated Bank with a retail banking license, and its subsidiaries together known as (the "Group").

The Board of Directors seeks to optimise the Group's performance by enabling the various Group business units to realise the Group's business strategy and meet agreed business performance targets by operating within the agreed capital and risk parameters and the Group risk policy framework.

2 Statement of Financial Position Under the Regulatory Scope of Consolidation

The table below shows the reconciliation between the statement of financial position in the published financial statements (accounting statement of financial position) and the regulatory statement of financial position.

Table – 1. Statement of Financial Position (PD- 1.3.14)

	Statement of Financial position as per published financial statements 30 June 2019 BD'000	*Statement of Financial position as per Regulatory Reporting 30 June 2019 BD'000*	*Reference*
ASSETS			
Cash and balances with banks and Central Bank	**57,868**	**57,868**	
Gross placements with financial institutions	*104,534*	*104,534*	
Less: Expected credit loss (stage 3)	-	-	
Less: Expected credit loss (stage 1 and stage 2)	*(2)*	-

3 Capital Adequacy

The primary objectives of the Group's capital management are to ensure that the Group complies with externally imposed capital requirements and the Group maintains strong credit ratings and healthy capital ratios in order to support its business and to maximise shareholders' value.

The Group manages its capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of its activities. In order to maintain or adjust the capital structure, the Group may adjust the amount of dividend payment to shareholders, return capital to shareholders, issue Sukuk etc. No changes were made in the objectives, policies, and processes from the previous years.

The Group's capital structure is primarily made up of its paid-up capital, and including reserves. From a regulatory perspective, the significant amount of the Group's capital is in Tier 1 form as defined by the CBB, i.e., most of the capital is of a permanent nature.

The Group's capital adequacy policy is to maintain a strong capital base to support the development and growth of the business. Current and future capital requirements are determined on the basis of financing facilities growth expectations for each business group, expected growth in off-balance sheet facilities, and future sources and uses of funds. To assess its capital adequacy requirements in accordance with CBB requirements, the Group adopts the Standardised Approach for its Credit Risk, Basic Indicator Approach for its Operational Risk, and Standardised Approach for its Market Risk. All assets funded by profit sharing investment accounts are subject to Board approval.

All transfer of funds or regulatory capital within the Group is carried out after proper approval process.

For the purposes of guidance, every table was cross referenced with the relevant paragraph number of the Central Bank of Bahrain's Public Disclosures Module.

3 Capital Adequacy (continued)

Table – 2. Capital Structure (PD-1.3.13, and 1.3.14)

The following table summarises the eligible capital as of 30 June 2019 after deductions for Capital Adequacy Ratio (CAR) calculation:

	CET 1 BD'000	*T2 BD'000*	*Source based on reference letters of the statement of financial position under the regulatory scope of consolidation*

Total Risk Weighted Assets	**949,435** (1)	**600,982** (2)	**1,550,417**	**701,931**	**108,287**	**810,218**	**87,742**	**13,536**	**101,278**

* The risk weighted assets are net of credit risk mitigant.

(1) The exposure is gross of expected credit loss Stages 1 & 2 of BD 3,288 thousand.

(2) The exposure is gross of expected credit loss Stages 1 & 2 of BD 4,364 thousand.

(3) For assets funded through IAH only 30% of exposure is considered.

3 Capital Adequacy (continued)

Table – 4. Capital requirements for market risk (PD-1.3.18)

The following table summarises the amount of exposures as of 30 June 2019 subject to standardised approach of market risk and related capital requirements:

Market Risk - Standardised Approach	
Foreign exchange risk (BD'000)	**385**
Total of Market Risk - Standardised Approach	**385**
Multiplier	**12.5**
Risk Weighted Exposures for CAR Calculation (BD'000)	**4,814**
Total Market Risk Exposures (BD'000)	**4,814**
Total Market Risk Exposures - Capital Requirement (BD'000)	**602**

Table – 5. Capital requirements for operational risk (PD-1.3.30 (a & b) and PD-1.3.19)

The following table summarises the amount of exposures as of 30 June 2019 subject to basic indicator approach of operational risk and related capital requirements:

Indicators of operational risk	
Average Gross income (BD'000)	**60,851**
Multiplier	**12.5**
	760,632
Eligible Portion for the purpose of the calculation	**15%**
Total Operational Risk Exposure (BD'000)	**114,095**
Total Operational Risk Exposures - Capital Requirement (BD'000)	**14,262**

Table – 6. Capital Adequacy Ratios (PD-1.3.20)

The following are Capital Adequacy Ratios as of 30 June 2019 for total capital and CET 1 capital:

	Total capital ratio	***CET 1 capital ratio***
Top consolidated level	**15.77%**	**14.34%**

4 Risk Management

4.1 Group-wide Risk Management Objectives

The risk management philosophy of the Group is to identify, capture, monitor and manage the various dimensions of risk with the objective of protecting asset values and income streams such that the interest of the Group's shareholders (and others to whom the Group owes a liability) are safeguarded, while maximising the returns intended to optimise the Group's shareholder return and maintaining it's risk exposure within self-imposed parameters.

In addition to satisfying the minimum regulatory capital requirements of CBB, the Group seeks to constantly identify and quantify, to the extent possible, the various risks that are inherent in the normal course of its business and maintain appropriate internal capital levels as per the ICAAP framework. The main objective of the Group's ICAAP is to ensure that adequate capital is retained at all times to support the risks the Group undertakes in the course of its business.

The Group's risk appetite is embodied through its risk strategy; BisB reviews and aligns its risk appetite in line with its evolving business plan, and changing economic and market scenarios, in addition to evolving regulatory requirements. The Group also assesses its tolerance for specific risk categories and its strategy to manage these risks. To monitor and report exposures to these identified risks, the Group adopted a comprehensive enterprise-wide Risk Management Framework that encompasses the risk limit, monitoring, and reporting structures.

4.2 Strategies, Processes and Internal Controls

4.2.1 Group's risk strategy

The Group maintains a risk strategy document that is reviewed on an annual basis. It also maintains a comprehensive Risk Management Framework that is approved by the Board. These are also supported by appropriate limit structures. These policies provide an enterprise-wide integrated risk management framework for the Group.

The Risk Management Framework identifies risk objectives, policies, strategies, and risk governance both at the Board and management level. With regards to capital management, the Group aims to ensure financial stability by allocating enough capital to cover unexpected losses.

Limit structures serve as key components in articulating risk strategy in quantifiable risk appetite. They are further supported by a comprehensive framework for various risk silos with its own policies and methodology documents.

There are appropriate internal controls in place to ensure that integrity of the risk management identification, monitoring and reporting systems. This is conducted through periodic internal audit, in addition to external validation, when required.

4 Risk Management (continued)

4.2 Strategies, Processes, and Internal Controls (continued)

4.2.2 Credit risk

The Group manages its credit risk exposure by evaluating each new product/activity with respect to the credit risk introduced by it. The Group has established a limit structure to avoid concentration of risks for counterparty, sector, and geography.

4.2.3 Market risk

The Group proactively measures and monitors the market risk in its portfolio using appropriate measurement techniques such as limits on its foreign exchange open positions although they are insignificant. The Group periodically carries out stress testing to assess the impact of adverse market conditions on its market risk sensitive portfolio.

The Group has established a limit structure to monitor and control the market risk in its trading portfolio. These limits include maximum Stop-loss limits and position limits. As at 30 June 2019, the group did not have any trading portfolio.

4.2.4 Operational risk

The Group has carried out Risk Control Self-Assessment (“RCSA”) exercises on a regular basis to record potential risks, controls and events on a continuous basis across different business and support functions. Operational risk key risk indicators are monitered and reported on a periodic basis to all relevant stakeholders in the Group.

The Group has established clear segregation of duties, through documentation and implementation of policies and procedures. This ensures objectivity, security, and avoids conflicts of interest. Maker checker concept and dual eye principles are applied across the Group, where possible.

4.2.5 Equity price risk

Equity price risk is the risk that the fair values of equities decrease as a result of changes in the levels of equity indices and the value of individual stocks. The equity price risk exposure arises from the investment portfolio. Currently, acquiring additional equity investments are off-strategy.

4.2.6 Profit rate risk

Profit rate risk arises from the possibility that changes in profit rates will affect future profitability or the fair values of financial instruments. The profit distribution to investment accountholders is based on profit sharing agreements. Therefore, the Group is not subject to any significant profit rate risk.

However, the profit sharing agreements will result in displaced commercial risk when the Group's results do not allow the Group to distribute profits in line with market rates.

4.2.7 Displaced Commercial Risk

Displaced commercial risk (“DCR”) refers to the market pressure to pay returns that exceed the rate that has been earned on the assets financed by the liabilities, when the return on assets is underperforming as compared with competitors rates.

The Group manages its Displaced Commercial Risk by placing gap limits between the returns paid to investors and market returns.

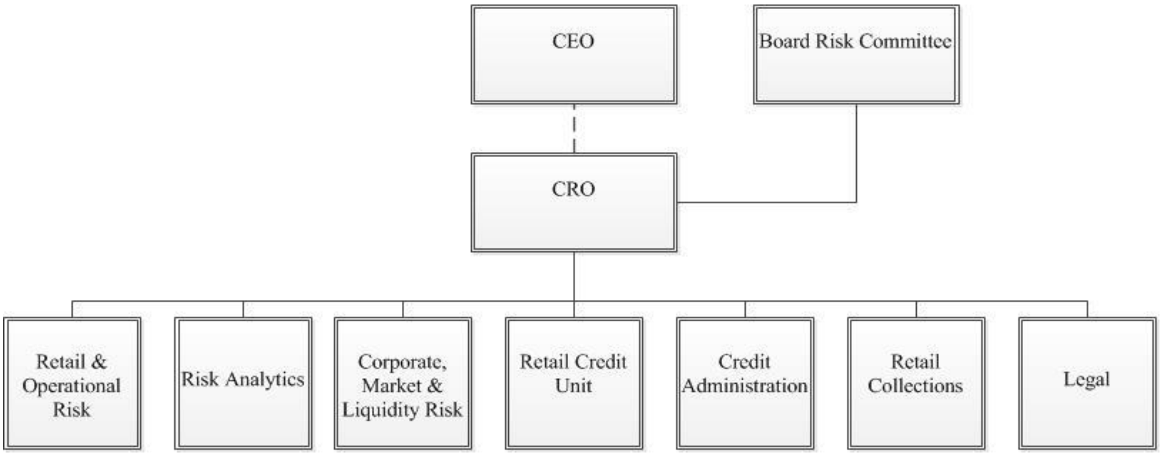
The Group manages its Displaced Commercial Risk as outlined in the Group's Profit Distribution On Equity of Investment Accountholders Policy. The Group may forego its mudarib fee in case displaced commercial risk arises. The Group benchmarks its rates with other leading banks in the market.

All the above strategies used have been effective throughout the reporting period.

4 Risk Management (continued)

4.3 Structure and Organisation of Risk Management Function

Risk Management Structure includes all levels of authorities (including Board level Risk committee), organisational structure, people, and systems required for the smooth functioning of risk management processes in the Group. The responsibilities associated with each level of risk management structure and authorities include the following:



The board retains ultimate responsibility and authority for all risk matters, including:

a Establishing overall policies and procedures; and

b. Delegating authority to Board Risk Committee, Board Credit Committee, Credit and Investment Committee, the Chief Executive Officer and further delegation to management to approve and review.

4 Risk Management (continued)

4.4 Risk Measurement and Reporting Systems

Based on risk appetite of the Group, the Group has put in place various limits. These limits have been approved by the Board of Directors. Any limit breaches are reported to the respective senior management committees and the Board by the Credit and Risk Management Department (“CRMD”). The limits are reviewed and revised at least on an annual basis or when is deemed required.

The Group has developed a risk measurement and reporting system that generates various types of reports which has enhanced the monitoring process of the Group.

4.5 Credit Risk

4.5.1 Introduction

Credit risk is the risk of financial loss if a customer or counterparty fails to meet an obligation under a contract. It arises principally from lending and investment activities. The Group controls credit risk by monitoring credit exposures, and continually assessing the creditworthiness of counterparties. Financing contracts are secured by suitable tangible collateral whereever deemed necessary.

The Group manages and controls credit risk by setting limits on the amount of risk it is willing to accept in terms of counterparties, product types, geographical area, and industry sector. The Group has established a credit quality review process to provide early identification of possible changes in the creditworthiness of counterparties, including regular collateral revisions. Counterparties are regularly assesed by the use of a credit risk classification system. Counterparty limits are established by the use of a credit risk classification system, which assigns each counterparty a risk rating. Risk ratings are subject to regular revision by the Credit Review Unit (“CRU”). Any changes to the Credit Risk Policy will be approved by the Board.

All credit proposals undergo a comprehensive risk assessment examining the customer’s financial condition, trading performance, nature of the business, quality of management, and market position, etc. In addition, the Group implemented Moody's Risk Analyst system in 2016 which has different rating models and generates ratings after taking into consideration quantitative and qualitative factors. This has further strengthened the approval process. The credit approval decision is then made and terms and conditions are set.

Exposure limits are based on the aggregate exposure to counterparty and any connected entities across the Group. Corporate contracts/facilities are reviewed on an annual basis by CRU, or more frequently based on the client's credit condition.

4.5.2 Types of credit risk

Financing contracts mainly comprise of due from banks and financial institutions, murabaha receivables, musharaka investments, and other exposures subject to credit risk comprising Ijarah Muntahia Bittamleek and rental receivables, commitments to finance and financial instruments resulting in contingencies (guarantees and letter of credit).

Due from banks and financial institutions

Due from banks and financial institutions comprise commodity murabaha receivables and wakala receivables.

Murabaha receivables

The Group finances these transactions through buying the commodity which represents the object of the Murabaha contract and then reselling this commodity to the Murabeh (beneficiary) at a profit. The sale price (cost plus profit margin) is repaid in installments by the Murabeh over the agreed period. The transactions are secured at times by the object of the Murabaha contract (in case of real estate finance) and other times by a total collateral package securing the facilities given to the Murabeh.

Musharaka investments

Musharaka is a form of partnership between the Group and its clients whereby each party contributes to the capital of partnership in equal or varying degrees to establish a new project or share in an existing one, whereby each of the parties becomes an owner of the capital on a permanent or declining basis. Profits are shared in an agreed ratio, but losses are shared in proportion to the amount of capital contributed.

Ijarah Muntahia Bittamleek

The legal title of the assets under Ijarah muntahia bittamleek only passes to the lessee at the end of the Ijarah term, through gift, consideration, or gradual sale, provided that all Ijarah installments are settled.

4 Risk Management (continued)

4.5 Credit Risk (continued)

4.5.3 Credit impaired exposures

The Group defines facilities as credit impaired facilities which are overdue for a period of 90 days or more, any exposure against which specific impairment provision is held irrespective of whether the customer is currently in arrears or not, and customers which are classified in stage 3 and are in cooling off period in line with CBB guidelines. It is a Group policy to classify all facilities of a counterparty as credit impaired if one or more facilities meets the conditions for credit impaired facilities.

As a policy, the Group places on a non-accrual basis any facility where there is reasonable doubt about the collectability of the receivable, irrespective of whether the customer concerned is currently in arrears or not. Income is recognised to the extent that it is actually received.

For general and specific impairment assessments, The Group classifies its financial instruments into stage 1, stage 2 and stage 3, based on the applied impairment methodology, as described below:-

Stage 1 (12 months ECL): for financial instruments where there has not been a significant increase in credit risk since initial recognition and that are not credit-impaired on origination, the group recognises an allowance based on the 12-month ECL. All accounts at origination would be classified as Stage 1 only exceptions are Purchased or Originated Credit Impaired (POCI) assets.

Stage 2 (lifetime ECL not credit impaired): for financial instruments where there has been a significant increase in credit risk since initial recognition but they are not credit-impaired, the group recognises an allowance for the lifetime ECL for all financings categorized in this stage based on the actual / expected maturity profile including restructuring or rescheduling of facilities.

Stage 3 (lifetime ECL credit impaired): for credit-impaired financial instruments, the group recognises the lifetime ECL. Default identification process i.e. DPD of 90 more is used as stage 3.

Measurement of ECL

The key inputs into the measurement of ECL are the term structure of the following variables:

(i) probability of default (PD);
(ii) loss given default (LGD); and
(iii) exposure at default (EAD).

These parameters are generally derived from internally developed statistical models and other historical data. They are adjusted to reflect forward-looking information as described above.

Corporate PD estimates are calculated based on statistical rating models, and assessed using rating tools tailored to the various categories of counterparties and exposures. These statistical models are based on internally compiled data comprising both quantitative and qualitative factors. If a counterparty or exposure migrates between ratings classes, then this will lead to a change in the estimate of the associated PD.

Retail PD estimates are measured using Observed Default Estimation at the segment level and thus PD will be calculated based at DPD bucket level for each segment separately. Under this analysis, the delinquency status of accounts will be tracked at an interval of one year with a moving month cycle.

Debt type instruments Portfolio, Nostro and Interbank Placements portfolio is assessed for SICR using external ratings, the group shall obtain PD estimates from Moody’s / Standard & Poor’s (S&P) / Fitch or any other external ratings.

LGD is the magnitude of the likely loss if there is a default. The group estimates LGD parameters based on the history of recovery rates of claims against defaulted counterparties. The LGD models consider the structure, collateral, seniority of the claim, counterparty industry and recovery costs of any collateral that is integral to the financial asset.

EAD represents the expected exposure in the event of a default. The group derives the EAD from the current exposure to the counterparty and potential changes to the current amount allowed under the contract including amortization. The EAD of a financial asset is its gross carrying amount. For financing commitments and financial guarantees, the EAD includes the amount drawn, as well as potential future amounts that may be drawn under the contract, which are estimated based on historical observations and forward-looking forecasts.

4.5.4 External credit assessment institutions

The Group relies on external ratings for rated corporate customers and counterparties. The Group uses Standard & Poor's, Fitch, Moody's and Capital Intelligence to provide ratings for such counterparties. In case of unrated counterparties, the Group will assess the credit risk on the basis of defined parameters. These ratings are used for risk assessment and calculation of risk weighted equivalents. The Group's policy has the mapping of the external ratings with the ratings used by the Group and the corresponding rating is allocated to the exposure accordingly to transfer it in the Group's banking book.

4.5.5 Definition of Geographical distribution

The geographic distribution of the credit exposures is monitored on an ongoing basis by the Group's Risk Management Department and reported to the Board on a quarterly basis. The Group's classification of geographical area is according to its business needs and the distribution of its portfolios.

4.5.6 Concentration risk

Concentration risk is the credit risk stemming from not having a well diversified credit portfolio, i.e. being overexposed to a single customer, industry sector, or geographic region. As per CBB's single obligor regulations, banks incorporated in Bahrain are required to obtain the CBB's prior approval for any planned exposure to a single unconnected counterparty, or group of closely related counterparties, exceeding 15% of the bank's consolidated total capital. Also, banks are required to obtain the CBB's prior approval for any planned exposure to connected counterparties exceeding 25% of their consolidated total capital at an aggregate level.

In order to avoid excessive concentrations of risk, the Group's policies and procedures include specific guidelines to focus on maintaining a diversified portfolio. Identified concentrations of credit risks are controlled and managed accordingly.

4.5.7 Credit risk mitigation

Credit risk mitigation refers to the use of a number of techniques, like collaterals and guarantees to mitigate the credit risks that the Group is exposed to. Credit risk mitigants reduce the credit risk by allowing the Group to protect against counterparty non-performance of credit contracts through collaterals, netting agreements, and guarantees. The Group uses on-balance sheet netting as a credit risk mitigation technique only if there is a well-founded legal basis for concluding that the netting or offsetting agreement is enforceable, and is able to determine at any time those assets and liabilities with the same counterparty that are subject to the netting agreement.

Generally, the Group extends credit facilities only where supported by adequate tangible collateral security and/or audited financial statements. Facilities may be considered without adequate tangible collateral security, when audited financial statements reveal satisfactory financial position/repayment ability and the facilities are properly structured and supported by assignments, guarantees, etc. as appropriate.

In general, personal guarantees of the partners/promoters/directors of the borrowing entity are obtained in support of credit facilities. In all cases, a statement of net worth of the guarantor is to be compiled by the Account Officer, so that adequate information is available at a future date in case the guarantees need to be enforced.

4 Risk Management (continued)

4.5 Credit Risk (continued)

4.5.7 Credit risk mitigation (continued)

The market value of tangible collateral security is properly evaluated by the Group's approved valuers (for properties) or based on publicly available quotations. The value of such security is considered only to the extent of the outstanding exposure of relevant credit facilities.

Financing to value percentage of securities and list of acceptable securities to the bank are governed through Board approved policies.

From time to time, the Credit and Investment Committee reviews and approves the financing to value percentage of securities. It has also approved a list of acceptable securities.

The majority of the Group’s current credit portfolio is secured through mortgage of real estate properties. The Group may dispose off the assets as a last resort after carrying out due legal process.

4.5.7.1 General policy guidelines of collateral management

Acceptable Collateral: The Group has developed guidelines for acceptable collateral. Assets offered by customers must meet the following criteria to qualify as acceptable collateral:

a. Assets must be maintaining their value, at the level prevalent at inception, until maturity date of the facility granted;
b. Such assets should be easily convertible into cash, if required (liquidity);
c. There should be a reasonable market for the assets (marketability); and
d. The Group should be able to enforce its rights over the asset if necessary (enforceability).

Ownership: Prior to valuation or further follow up on the offered collateral, Credit Administration ensures satisfactory evidence of the borrower’s ownership of the assets.

Valuation: All assets offered as collateral are valued by an appropriate source either in-house (through another department in the Group) or by an external appraiser (real estate related collateral). The Group maintains a list of independent appraisers, approved by management.

a. **Valuation of shares and goods:** Where competent staff is available within the Group, the valuation is conducted in-house. The Group performs in-house valuation on the following types of securities:

- Pledge of shares of local companies;
- Pledge of international marketable shares and securities; and
- Pledge and hypothecation of goods.

Quoted shares are valued at the quotes available from stock exchanges, periodicals, etc.

b. **Valuation of real estate and others:** Besides assets mentioned above, the valuation of following securities are also conducted with the help of external valuers:

- Real Estate;
- Equipment and machinery; and

The Credit Administration requests the concerned department to arrange for the valuation from approved valuators.

4 Risk Management (continued)

4.5 Credit Risk (continued)

4.5.7 Credit risk mitigation (continued)

4.5.7.1 General policy guidelines of collateral management (continued)

The following additional guidelines are also followed by the Group:

a. No facility should be disbursed until credit documentation is properly signed and security/guarantees required have been signed and registered, where required. Exceptional cases can be considered by sanctioning authorities; and

b. All documents received as security or support for credit facilities will be lodged in the safe custody through the Credit Administration and should be kept under dual control. The Group must ascertain that collateral providers are authorised and acting within their capacity.

4.5.7.2 Guarantees

In cases where a letter of guarantee from a parent company or a third party is accepted as a credit risk mitigant, the Group ensures that all guarantees are irrevocable, legal opinion has been obtained from a legal counsellor domiciled in the country of guarantor (overseas) regarding the enforceability of the guarantee, if the guarantor / prime obligor is domiciled outside Bahrain and all guarantees should be valid until full settlement of the facilities. Also no maturity (negative) mismatch is permissible between the guarantee and exposure.

4.5.7.3 Custody / collateral management

The assets, or title to the asset, will be maintained in the Group’s custody or with custodians approved by the Group. Adequate systems and controls exist to confirm the assets held with each custodian.

The release of collateral without full repayment of all related financial obligations can be done only if the approved level of security coverage is maintained post the release otherwise it requires authorisation of the same level that originally approved and sanctioned the facility. Substitution of collateral is permitted if the new collateral would further minimise the Group’s risk exposure.

When collateral is released to the customer, the Head of Credit Administration obtains and maintains in his records acknowledgement of receipt from the customer or his/her authorised representative.

4.5.8 Counterparty credit risk

The Group has adopted the Standardised Approach to allocate capital for counterparty credit risk. The Group has put in place an internal counterparty limit structure which is based on internal / external ratings for different types of counterparties. The Group has also set concentration limits as a percentage of its capital based on internal and external grades. In case of a counterparty rating downgrade / deterioration, the Group may require further collateral or advise the counterparty to reduce its exposure on a case by case basis.

4.5.8.1 Exposure

The measure of exposure reflects the maximum loss that the Group may suffer in case a counterparty fails to fulfill its commitments. Exposure shall always be calculated on the basis of approved limits or actual outstanding exposure (Financing facilities, Investments or others), whichever is higher.

4.5.8.2 Counterparty

A counterparty is defined as an obligor (individual/company/other legal entity), a guarantor of an obligor, or a person receiving funds from the Group, the issuer of a security in case of a security held by the Group, or a party with whom a contract is made by the Group for financial transactions.

4 Risk Management (continued)

4.5 Credit Risk (continued)

4.5.8 Counterparty credit risk (continued)

4.5.8.3 Group exposure

Group exposure is defined as the total exposure to all counterparties closely related or connected to each other. For this purpose, a Group is two or more counterparties related in such a way that financial soundness of one may affect the financial soundness of the other(s) and one of them has a direct or indirect control over the other(s).

4.5.8.4 Connected counterparties

Connected counterparties' includes companies or persons connected with the Group, including, in particular; controllers of the Group (and their appointed board representatives); subsidiaries, associates and related parties of the Group; holders of controlled functions in the Group and their close family members; members of the Shari'a Supervisory Board.

4.5.8.5 Large exposure

Large exposure is any exposure whether direct, indirect, or funded by equity of investment accountholders to a counterparty or a group of closely related counterparties which is greater than or equal to 10% of the Group's capital base.

Prior written approval from the CBB is required in the following cases:

a. If any unconnected counterparty (single/group) exposure exceeds 15% of Group's Capital Base;
b. If any facility (new/extended) to any connected counterparty exceeds 25% of the consolidated total capital at an aggregate level

4.5.8.6 Maximum exposure

The Group has set an internal maximum exposure limit in the light of CBB guidelines.

4.5.8.7 Reporting

The Group reports large counterparty exposures (as defined above) to CBB on a periodic basis. The Group reports the exposures on a gross basis without any set-off. However, debit balances on accounts may be offset against credit balances where both are related to the same counterparty, provided the Group has a legally enforceable right to do so.

4.5.8.8 Other matters

As a Group's strategy, exposure to connected counterparties may be undertaken only when negotiated and agreed on an arm's length basis.

The Group shall not assume any exposure to its external auditors.

4.5.9 Related party transactions

The disclosure relating to related party transactions has been made in the condensed consolidated interim financial information as of 30 June 2019. All related party transactions have been made on arm's length basis.

Total	**577,035**	**196,015**	**773,050**
Collateral held:			
-Cash	12,397	217	12,614
-Guarantees	4,263	-	4,263
-Shares	5,796	-	5,796
-Real Estate	4,687	17,822	22,509
Total	**27,143**	**18,039**	**45,182**
Collateral as a percentage of secured exposure	35.44%	67.47%	43.73%

A haircut of 30% is applied on the Real Estate collateral.
*The financing assets and Ijarah Muntahia Bittamleek exposures are net of ECL.

4.6 Market Risk

4.6.1 Introduction
The Group has accepted the definition of market risk as defined by CBB as the risk of losses in on- and off-balance sheet positions arising from movements in market prices.

4 Risk Management (continued)

4.6 Market Risk (continued)

4.6.2 Sources of market risk

For the Group, market risk may arise from movements in profit rates, foreign exchange markets, equity markets, or commodity markets. A single transaction or financial product may be subject to any number of these risks.

Profit rate risk is the sensitivity of financial products to changes in the profit rates. Profit rate risk arises from the possibility that changes in profit rates will affect future profitability or the fair values of financial instruments. The Group's management believe that the Group is not exposed to material profit rate risk as a result of mismatches of profit rate repricing of assets, liabilities, and equity of investment accountholders as the repricing of assets, liabilities and equity of investment accountholders occur at similar intervals. The profit distribution to equity of investment accountholders is based on profit sharing agreements.

Foreign exchange risk is the sensitivity of financial products to changes in spot foreign exchange rates. The value of the Group’s portfolio which is denominated in a number of currencies may be exposed to these risks when converted back to the Group’s base currency.

Equity price risk is the sensitivity of financial products to the changes in equity prices. Equity risk arises from holding open positions in equities or equity based instruments, thereby creating exposure to a change in the market price of the equity. The Group has established a limit structure to monitor and control the market risk in its equity type instruments portfolio. These limits include maximum Stop-loss limits and position limits. As at 30 June 2019, the group did not have any trading portfolio. Currently, any new equity investments are off-strategy.

Commodity risk is defined as inherent risk in financial product arising from their sensitivity to changes in commodity prices. Since prices in commodity markets are determined by fundamental factors (i.e. supply and demand of the underlying commodity) these markets may be strongly correlated within particular sector and less correlated across sectors.

4.6.3 Market risk strategy

The Group’s Board is responsible for approving and reviewing (at least annually) the risk strategy and significant amendments to the risk policies. The Group's senior management is responsible for implementing the risk strategy approved by the Board, and continually enhancing the policies and procedures for identifying, measuring, monitoring, and controlling risks.

In line with the Group’s risk management objectives and risk tolerance levels, the specific strategies for market risk management include:

a. The Group will manage its market risk exposure by evaluating each new product / activity with respect to the market risk introduced by it;
b. The Group will proactively measure and continually monitor the market risk in its portfolio;
c. The Group will at all time hold sufficient capital in line with the CBB Pillar 1 regulatory capital requirements;
d. The Group will establish a limit structure to monitor and control the market risk in its portfolio. These limits will include position limits, and maximum/stop loss limits;
e. The Group will carry out stress testing periodically using the worst case scenarios to assess the effects of changes in the market value due to changing market conditions; and
f. The Group will clearly identify the foreign currencies in which it wishes to deal in and actively manage its market risk in all foreign currencies in which it has significant exposure.

4 Risk Management (continued)

4.6 Market Risk (continued)

4.6.4 Market risk measurement methodology
Market risk measurement techniques include the use of a number of techniques for market risk measurement. The risk measurement techniques mentioned in this section are used for measuring market risk in both trading book as well as banking book.

The various techniques which are used by the Group for the measurement, monitoring and control of market risk are as follows:

a. Overnight open positions;
b. Stop loss limits;
c. Stress Testing; and
d. Profit rate risk gap analysis.

4.6.5 Market risk monitoring and limits structure
The Asset and Liability Committee (ALCO) proposes through the Board Risk Committee (BRC) and Board the tolerance for market risk. Based on these tolerances, Risk Unit and Treasury have established appropriate risk limits that maintain the Group's exposure within the strategic risk tolerances over a range of possible changes in market prices and rates.

4.6.6 Limits monitoring
The Treasury Department and Risk Unit monitor the risk limits for each transaction, ensure that the limits are well within set parameters, and report periodically to top management.

4.6.7 Breach of limits
In case a limit is breached, the escalation and approval process will follow the Board-approved delegated authority limits. The limits are revised at least annually or when deemed required.

4.6.8 Portfolio review process
On a monthly basis, Risk Unit reviews the Group's assets and liabilities portfolio to evaluate the overall corporate exposure to market risk. As part of the review, Risk Unit also monitors the Group's overall market exposure against the risk tolerance limits set by the Board. Risk Unit also reviews the adherence to approved limits to control the market risk. Changes, if any, in market risk limits are communicated to business units after review by the CRO/CEO and approval by the ALCO or BRC, as per the delegated authorities approved by the Board. Balance sheet exposure is being reviewed on a quarterly basis by the BRC.

4.6.9 Reporting
Risk Unit generates at regular periodic intervals market risk management reports. These reports aim to provide the Group's senior management with an up-to-date view of its market risk exposure.

4.6.10 Stress testing
Stress tests produce information summarising the Group's exposure to extreme, but possible, circumstances and offer a way of measuring and monitoring the portfolio against extreme price movements of this type. The Group's Risk Unit employs different stress categories: profit rates and foreign
exchange rates. For each stress category, the worst possible stress shocks that might realistically occur in the market are defined.

4 Risk Management (continued)

4.6 Market Risk (continued)

4.6.11 Foreign subsidiary
The Group does not have any foreign subsidiary.

Table – 18. Market Risk Capital Requirements (PD-1.3.27 (b))

The following table summarises the maximum and minimum capital requirement for foreign exchange risk for the period:

	Foreign exchange risk BD'000
Maximum value capital requirement	**602**
Minimum value capital requirement	**385**

4.7 Operational Risk

4.7.1 Introduction
Operational risk is the risk of loss arising from system failure, human error, fraud, or external events. When controls fail to perform, operational risks can cause damage to reputation, have legal or regulatory implications, or lead to financial loss. The Group cannot expect to eliminate all operational risks, but through a control framework and by monitoring and responding to potential risks, the Group is able to manage the risks. Controls include effective segregation of duties, access, authorisation and reconciliation procedures, staff education and assessment processes, including the use of internal audit.

4.7.2 Sources of operational risk
The different sources of operational risks faced by the Group can be classified broadly into the following categories:

a. People risk which arises due to staffing inadequacy, unattractive remuneration structure, lack in staff development policies, lack in procedures for appointment, unhealthy professional working relationship, and unethical environment;

b. Processes risk which arises due to inadequate general controls, inadequate application controls, improper business and market practices and procedures, inappropriate/inadequate monitoring and reporting;

c. Systems (Technology) risk which arises due to integrity of information - lacking in timeliness of information, omission and duplication of data, hardware failures due to power surge, obsolescence or low quality;

d. External risk which arises due to natural or non-natural (man made) disaster; and

e. Legal risk which arises due to contractual obligations.

4.7.3 Operational risk management strategy
As a strategy, the Group will identify the sources of operational risks in coordination with each business unit. The Group carried out Risk Control Self-Assessments ("RCSA"), and plans to do a continuous and on-going exercise to identify the operational risks it is exposed to.

4 Risk Management (continued)

4.7 Operational Risk (continued)

4.7.3 Operational risk management strategy (continued)

The Group on a continuous basis will:

a. assess the effectiveness of controls associated with identified risks;
b. regularly monitor operational risk profiles and material exposures to losses / loss events;
c. identify stress events and scenarios to which it is vulnerable and assess their potential impact, and the probability of aggregated losses from a single event leading to other risks;
d. Monitoring and reporting of operational risk is through the Operational Risk Management Forum (ORMF), a management-level committee responsible for monitoring and discussing the operational risks emanating from the group's activities; and
e. Effecting appropriate contingency and business continuity planning that takes into account the operational risks facing the Group, and providing training on the same to ensure that this is fostered across the organization.

4.7.4 Operational risk monitoring and reporting

The internal monitoring and reporting process ensures a consistent approach for providing pertinent information to senior management for the quick detection and correction of deficiencies in the policies, processes, and procedures for managing operational risk through ongoing, periodic reviews.

The objective of the reporting process is to ensure relevant information is provided to senior management and the Board to enable the proactive management of operational risk. The process ensures a consistent approach for providing information that enables appropriate decision making and action taking.

The group has a legal department dedicated to monitor any legal risk arising out of contracts / agreements entered into by the group on a day to day basis. The department also liaises with external lawyers for legal cases filed by the group against delinquent accounts for recovery or any legal cases filed against the group.

4.7.5 Operational risk mitigation and control

The business units, in consultation with Risk Units will determine all material operational risks and decide the appropriate procedures to be used to control and/or mitigate the risks.

For those risks that cannot be controlled, the business units in conjunction with Risk Unit will decide whether to accept the risks, reduce the level of business activity involved, transfer the risk outside the Group, or withdraw from the associated activity completely. Risk Unit facilitates the business units in co-developing the mitigation plans. The group deals with the pending legal cases through internal and external lawyers depending upon the severity of the cases.

As of 30 June 2019 the Group did not have any material legal contingency from pending legal actions. Based on management estimates there is no potential liability arising from these pending legal actions.

Table - 19. Operational Risk Exposure (PD-1.3.30 (a) & (b))

The following table summarises the amount of exposure subject to basic indicator approach of operational risk and related capital requirements:

	Gross income		
	2018	**2017**	**2016**
	BD'000	**BD'000**	**BD'000**
Total Gross Income	**67,905**	**60,654**	**53,993**
Indicators of operational risk			
Average Gross income (BD'000)			**60,851**
Multiplier			**12.5**
			760,632
Eligible Portion for the purpose of the calculation			**15%**
TOTAL OPERATIONAL RISK WEIGHTED EXPOSURE (BD'000)			**114,095**

4 Risk Management (continued)

4.8 Equity Position in the Banking Book

Equity price risk is the risk that the fair values of equities decrease as a result of changes in the levels of equity indices and the value of individual stocks. The equity price risk exposure arises from the Group's investment portfolio. To date, the Bank does not carry significant equity position risk in its banking book.

The accounting policies, including valuation methodologies and their related key assumptions, are consistent with those disclosed in the consolidated financial statements as of 30 June 2019. Equity type instruments carried at fair value through equity and investment properties are kept for capital gain purposes, all other investments including investments in associates are kept for strategic long term holdings.

Table – 20. Equity Position Risk in Banking Book (PD-1.3.31 (b), (c) & (g))

The following table summarises the amount of total and average gross exposure of equity investments and funds as of 30 June 2019:

	Total gross exposure [1] BD'000	*Average gross exposure [2] BD'000*	*Publicly traded BD'000*	*Privately held BD'000*	*Risk weighted assets BD'000*	*Capital Requirements BD'000*
Equity investments	28,436	28,436	-	28,436	58,313	**7,289**
Funds	14,168	14,168	-	14,168	55,727	**6,966**
Total	**42,604**	**42,604**	**-**	**42,604**	**114,040**	**14,255**

[1] Balances are gross of provision of BD 10,204 thousand.
[2] Average balances are computed based on quarter end balances.

Table – 21. Equity Gains or Losses in Banking Book (PD-1.3.31 (d), (e) & (f))

The following table summarises the cumulative realised and unrealised gains or (losses) during the period ended 30 June 2019:

	BD'000
Cumulative realised gain arising from sales or liquidations in the reporting period	**-**
Total unrealised losses recognised in the consolidated statement of financial position but not through consolidated statement of income	**-**
Unrealised gains included in CET 1 Capital	**718**
Unrealised gains included in Tier 2 Capital	**-**

4 Risk Management (continued)

4.9 Equity of Investment Accountholders ("IAH")

The Group may require to decrease or increase loses or profit on certain IAH accounts for the purpose of income smoothing. Thus the Group is exposed to some of the price risk on assets funded by equity of Investment Accountholders (“IAH”). The CBB requires the Group to maintain capital to cover the price risk arising from 30% of assets funded by IAH on a pro-rata basis.

The Group is authorised by the IAH to invest the account holder’s funds on the basis of Mudaraba contract in a manner which the Group deems appropriate without laying down any restrictions as to where, how, and for what purpose the funds should be invested. Under this arrangement the Group can commingle the equity of investment accountholders investment funds with its own funds (owner’s equity) or with other funds the Group has the right to use (e.g. current accounts or any other funds which the Group does not receive on the basis of Mudaraba contract). The IAH and the Group generally participate in the returns on the invested funds; however, the Group does not share profits with IAH resulting from investing current accounts and other funds received on the basis other than mudaraba contracts. In such type of contract, the Group is not liable for any losses incurred on the joint pool other than the loss resulting from gross negligence or wilful misconduct on the part of the Group or due to the Group’s violation of the terms and conditions as agreed between the Group and the IAH. During the period, the Group waived 36% of profit from mudarib fees in order to maintain a competitive profit distribution to IAH.

The amount received from the customer on account of equity of investment accountholders is not invested completely in the portfolio of selected investments as the Group is required to maintain a cash reserve with CBB. In addition, the Group requires to set aside certain amount to meet operational requirements. The income allocated to the equity of investment accountholders deposits being received is in accordance with the utilisation of such funds. The utilisation rate is determined by the ALCO with the approval of Shari’a Supervisory Board.

Proposal for new products is initiated by the business lines within the Group and ALCO review such proposal to ensure that the new product is in line with the Group’s business and risk strategy. All new products require the approval of the Shari’a Supervisory Board of the Bank. The business lines of the Group have expertise in creating high end value added products offering a wide range of products, expected return, tenors, and risk profile. Information on new products or any change in the existing products will be placed on the Group’s website or published in the media.

These accounts are made available to customers through Retail Banking (to include the Thuraya Banking segment), in addition to the Group's Corporate and Institutional Banking division. The Group has designed special Quality of Service and Complaints Management Unit which reports to GM Retail. The complaints are investigated by personnel not directly related to the subject matter of the complaints.

The Group offers equity of investment accountholders in different currencies for maturity periods ranging from 1 month, 3 months, 6 months, 9 months, 12 months, and 36 months. The customer signs a written contract covering all terms and conditions of the investment, including tenor, basis of profit allocation, and early withdrawal. This is made available to both retail and corporate customers.

Because equity of investment accountholders is a significant funding source for the Group, the Group regularly monitors rate of return offered by competitors to evaluate the expectation of its IAH. The Group’s policy provide whole or partial waiver of the mudarib share of income from investment in order to provide a reasonable return to its investors.

4 Risk Management (continued)

4.9 Equity of Investment Accountholders ("IAH") (continued)

The Group has already developed written policies and procedures applicable to its portfolio of Equity of investment accountholders. Equity of investment accountholders funds are invested and managed in accordance with Shari'a requirements.

Profits of an investment jointly financed by the Group and the equity of investment accountholders shall be allocated between them according to the contribution of each of the Group and the IAH in the jointly financed investment. Operating expenses incurred by the Group are not charged to investment account. In case of the loss resulting from the transactions in a jointly financed investment, such loss shall first be deducted from undistributed profits, if any. Any excess of such loss shall be deducted from Investment Risk Reserve (IRR). Any remaining of such loss shall be deducted from the total balance of fund available in the Joint pool, as at that date, in the respective ratio of the Group's and IAH's respective contribution to the comingled pool. During the year the Bank has allocated Stage 1 and Stage 2 ECL allowances towards IAH. The Bank temporarily allocates certain non-performing assets (past due greater than 90 days) from IAH to the equity shareholders and charges the specific impairment provisions to the owners' equity. Amounts recovered from these impaired assets is not subject to allocation between the IAH and owners' equity. The Bank takes remedial action on these non-performing assets and once these assets become performing, the assets and related income are allocated between the IAH and owners' equity. Impairment provisions (if any) relating to non-performing assets allocated to IAH are allocated to the equity shareholders. Any recoveries from such accounts are also allocated to the equity shareholders.

In case of early withdrawal of IAH fund before completion of the term, the effective utilisation method will be applied.

In case of term deposits, the IAH account holders can withdraw funds on a premature basis by paying a nominal amount of fees / penalty; such penalties are offered for charity.

Additional disclosures such as the below are disclosed in the Bank's website;
a. Characteristics of investors for whom investment account may be appropriate
b. Purchase redemption and distribution procedures
c. Product information and the manner in which the products are made available to investors

Governance of IAH

a. Shariah review of allocation of assets and resultant income;

b. Disclosure of profit rates on deposit products and mudaraba fees either in the branch or website;

c. ALCO discusses the profit rate to be offered to URIA accounts. Any exceptional profit rates offered to customers are subject to approval by the relevant authority.

Table – 22. Equity of Investment Accountholders by Type (PD-1.3.33 (a))

The following table summarises the breakdown of equity of investment accountholders accounts as of 30 June 2019:

	BD'000
Banks and financial institutions	**48,148**
Individuals and non-financial institutions	**548,470**
Total	**596,618**

Table – 23. Equity of Investment Accountholders Ratios (PD-1.3.33 (d) & (f))

The following table summarises the return on average assets and mudarib share as a percentage of the total investment profit for the period ended 30 June 2019:

Profit Paid on Average IAH Assets *	**1.04%**
Mudarib Fee to Total income from jointly financed assets	**33.45%**

*Average assets funded by IAH have been calculated using month end balances.

4 Risk Management (continued)

4.10 Liquidity Risk

4.10.1 Introduction
Liquidity risk is defined as "the risk that the Group will be unable to meet its obligations as they come due because of an inability to obtain adequate funding or to liquidate assets".

4.10.2 Sources of liquidity risk
The sources of liquidity risk can broadly be categorised in the following:

a. Funding risk is the risk of not being able to fund net outflows due to unanticipated withdrawal of capital or deposits;

b. Call risk is the risk of crystallisation of a contingent liability; and

c. Event risk is the risk of rating downgrades or other negative public news leading to a loss of market confidence in the Group.

4 Risk Management (continued)

4.10 Liquidity Risk (continued)

4.10.3 Bank's funding strategy
The Board reviews the funding strategy on an annual basis and amends the existing strategy, as deemed necessary. For this purpose, all business units advise the Treasurer of their projected liquidity requirements and contributions at the start of each year as part of annual budgeting process.

The funding strategy highlights any anticipated liquidity shortfalls, the funding requirements to finance these shortfalls and their impact on the statement of financial position. The Group's Risk Charter and Liquidity Policy address liquidity contingency plan to deal with stressed scenarios and outline an action plan that can be taken in the event of liquidity stress situation.

4.10.4 Liquidity risk strategy
The Group monitors the liquidity position by comparing maturing assets and liabilities over various time buckets to include short term, medium term, and long-term buckets. The Group carries out stress testing periodically using the worst case scenarios to assess the effects of changes in market conditions on the liquidity of the Group. As a strategy the Group maintains a large customer base and good customer relationships.

The Risk Unit periodically reviews/updates (at least annually) the liquidity risk strategy which is evaluated by ALCO before presenting to the BRC and the Board for approval.

The bank manages funding requirements through the following sources: Current accounts, savings accounts, other URIA accounts, interbank lines, and borrowing by leverage of Sukuk portfolio.

4.10.5 Liquidity risk measurement tools
The Group is monitoring the liquidity risk through ALCO.

4.10.6 Liquidity risk monitoring
The Group has set the tolerance for liquidity risk which are communicated to the Risk Unit and Treasury Department. Based on these tolerances, Risk Unit and Treasury have established appropriate risk limits that maintain the Group's exposure within the strategic risk tolerances over a range of possible changes in liquidity situations due to cash flows in current accounts, and IAHs.

4.10.7 Liquidity limits structure
The Group uses a combination of different limits to ensure that liquidity is managed and controlled in an optimal manner. The Group has set the following limits for monitoring liquidity risks:

a. Liquidity Gap limits; and
b. Liquidity Ratio limits.

4.10.8 Liquidity risk stress testing
To evaluate whether the Group is sufficiently liquid, behavior of the Group's cash flows under different conditions are observed.

4.10.9 Contingency funding plan
The Group does contingency funding exercises which details procedures to be followed by the Group, in the event of a liquidity crisis or a situation where the Group faces stressed liquidity conditions. The contingency funding plan will be an extension of day to day liquidity management and involves maintenance of an adequate amount of liquid assets and management of access to funding resources. The ALCO members discuss and monitor the situation over regular time-intervals to ensure sufficient liquidity in the Group.

4.10 Liquidity Risk (continued)

Table – 32. Liquidity Ratios (PD-1.3.37)

The following table summarises the liquidity ratios for the past five years:

	2019	*2018*	*2017*	*2016*	*2015*
Due from banks and financial institutions / Total Assets	**8.17%**	10.74%	6.58%	6.12%	7.49%
Islamic Financing / Customer Deposits [(1)]	**77.97%**	83.31%	80.04%	85.13%	80.53%
Customer Deposits [(1)] / Total Assets	**77.51%**	71.85%	75.32%	77.43%	77.50%
Short term assets [(2)] / Short term liabilities [(3)]	**18.40%**	22.97%	20.35%	18.53%	22.38%
Liquid Assets [(4)] / Total Assets	**9.87%**	13.11%	9.38%	8.95%	10.26%
Growth in Customer Deposits	**6.05%**	(0.67%)	17.62%	6.64%	7.48%

[(1)] Customer deposits includes customer current accounts, placements from non-banks and IAH.

[(2)] Short term assets includes cash and balances with banks and placements with financial institutions (maturing in a year).

[(3)] Short term liabilities includes customer current accounts, other liablities, placements from financial institutions (maturing within one year) and IAH (maturing within one year).

[(4)] Liquid assets includes cash and balances with banks and Central Bank (exluding CBB reserve) and placements with financial institutions (maturing in a year).

4.11 Profit Rate Risk

Profit rate risk is the potential impact of the mismatch between the rate of return on assets and the expected rate of funding due to the sources of finance.

Senior management identifies the sources of profit rate risk exposures based upon the current as well as forecasted balance sheet structure of the Group. The profit rate risk in the Group may arise due to the following transactions:

a. Murabaha transactions;
b. Wakala transactions;
c. Ijarah Muntahia Bittamleek;
d. Sukuk; and
e. Musharaka investments.

The profit distribution to equity of investment accountholders is based on profit sharing agreements. Therefore, the Group is not subject to any significant profit rate risk.

4.11.1 Sources of Profit Rate Risk
The different profit rate risks faced by the Group can be classified broadly into the following categories:

a. Re-pricing risk which arises from timing differences in the maturity (for fixed rate) and re-pricing (for floating rate) of assets, liabilities and off balance sheet positions. As profit rates vary, these re-pricing mismatches expose the Group’s income and underlying economic value to unanticipated fluctuations;
b. Yield curve risk which arises when unanticipated shifts of the yield curve have adverse effects on the Group’s income and/or underlying economic value;
c. Basis risk which arises from imperfect correlation in the adjustment in the rate earned on products priced and the rate paid on different instruments with otherwise similar re-pricing characteristics. When profit rates change, these differences can give rise to unexpected changes in the cash flows and earnings spread between assets, liabilities, and off balance sheet instruments of similar maturities or re-pricing frequencies; and
d. Displaced Commercial Risk refers to the market pressure to pay returns that exceeds the rate that has been earned on the assets financed by the liabilities, when the return on assets is under performing as compared with competitors rates.

4 Risk Management (continued)

4.11 Profit Rate Risk (continued)

4.11.2 Profit rate risk strategy
The Group is subject to profit rate risk on its financial assets and financial liabilities. The Group recognises income on certain of its financial assets on a time-apportioned basis. As a strategy the Group:

a. has identified the profit rate sensitive products and activities it wishes to engage in;
b. has established a structure to monitor and control the profit rate risk of the Group;
c. measures profit rate risk through establishing maturity/re-pricing schedule that distributes profit rate sensitive assets, liabilities and off-balance sheet items in pre-defined time bands according to their maturity; and
d. makes efforts to match the amount of floating rate assets with floating rate liabilities in the banking book.

4.11.3 Profit rate risk measurement tools
The Group uses the following tools for profit rate risk measurement in the banking book:

a. Re-pricing gap analysis which measures the arithmetic difference between the profit-sensitive assets and liabilities of the banking book in absolute terms; and
b. Basis Point Value ("BPV") analysis which is the sensitivity measure for all profit rate priced products and positions. The BPV is the change in net present value of a position arising from basis point shift in the yield curve. This quantifies the sensitivity of the position or portfolio to changes in profit rates.

4.11.4 Profit rate risk monitoring and reporting
The Group has implemented information systems for monitoring, controlling and reporting profit rate risk. Reports are provided on a timely basis to all relevant stakeholders in the Group on a periodic basis.

Table – 33. Profit Rate Risk in Banking Book (PD-1.3.40 (b))

The following table summarises the profit rate gap position as of 30 June 2019:

	Up to 3 months BD'000	*3-6 months BD'000*	*6-12 months BD'000*	*1-3 years BD'000*	*Over 3 years BD'000*	*Total BD'000*
Assets						
Placements with financial institutions	**96,698**	**7,834**	**-**	**-**	**-**	**104,532**
Financing assets	**56,176**	**33,559**	**52,850**	**177,709**	**256,741**	**577,035**
Ijara Muntahia Bittamleek and rental receivables	**25,264**	**1,763**	**5,646**	**23,170**	**140,172**	**196,015**
Investment in Sukuk	**40,547**	**12,298**	**7,545**	**43,351**	**141,779**	**245,520**
Total profit rate sensitive assets	**218,685**	**55,454**	**66,041**	**244,230**	**538,692**	**1,123,102**
Liabilities And Equity Of Investment Accountholders						
Placements from financial institutions*	**103,405**	**30,943**	**3,390**	**-**	**-**	**137,738**
Placements from non-financial institutions and individuals	**35,578**	**22,969**	**89,736**	**16,777**	**-**	**165,060**
Borrowings from financial institutions	**75,754**	**-**	**-**	**-**	**-**	**75,754**
Equity of investment accountholders**	**169,614**	**103,831**	**72,831**	**6,614**	**243,728**	**596,618**
Total profit rate sensitive laibilities and IAH	**384,351**	**157,743**	**165,957**	**23,391**	**243,728**	**975,170**
Profit rate gap	**(165,666)**	**(102,289)**	**(99,916)**	**220,839**	**294,964**	**147,932**

*Placements from financial institutions excludes frozen accounts of BD 9,245 thousand.

**The Bank uses expected withdrawal pattern to classify its saving accounts into different maturity buckets. The remaining IAH balances are disclosed on a contractual basis.

The following table summarises the effect on the value of assets, liabilities and economic capital for a benchmark change of 200 bp in profit rates as of 30 June 2019:

	Effect on value of Asset BD'000	***Effect on value of Liability BD'000***	***Effect on value of Economic Capital BD'000***
Upward rate shocks:	**(5,466)**	**9,782**	**4,316**
Downward rate shocks:	**5,466**	**(9,782)**	**(4,316)**
